

A collection of colorful geometric shapes, including triangles and chevrons in red, yellow, and teal, arranged in a stylized, abstract pattern on the left side of the image.

OBJECT DETECTOR

OBJECT DETECTION MADE
EASY....

INTRODUCTION

Welcome to the user manual for our Object Detection App! This app is designed to help you identify and classify objects in images or video streams using state-of-the-art machine learning algorithms. Whether you're a professional researcher, an enthusiast, or just curious about what's in your surroundings, this app aims to provide you with a powerful and intuitive tool for object recognition.

GETTING STARTED

1. **Installation:** Download and install the Object Detection App from the respective app store for your device (iOS/Android).
2. **Permissions:** Upon launching the app for the first time, ensure to grant necessary permissions such as camera access for optimal functionality.
3. **User Interface:** Familiarize yourself with the user interface, which typically consists of a camera viewfinder, a capture button, and options for selecting detection modes and settings.

BEST PRACTICES

- Hold the camera steady and focus on the objects of interest to improve detection performance.

- Ensure good lighting conditions for optimal object detection accuracy.

- Experiment with different detection modes and settings to find what works best for your needs.

- Regularly update the app to access new features, improvements, and bug fixes.

USING THE APP

1. **Capture Images/Video:**

- To capture an image, aim the camera at the object(s) of interest and tap the capture button.
- For video detection, switch to video mode and begin recording. The app will continuously analyze the video stream.

2. **Object Detection:**

- After capturing an image or starting video detection, the app will process the data to identify and outline objects within the frame.
- Objects are typically labeled with their predicted class (e.g., "person," "car," "cat") for easy identification.

3. **Detection Modes:**

- Explore different detection modes such as:
 - Single Object Detection: Identifies and outlines the most prominent object in the frame.
 - Multi-Object Detection: Detects and outlines multiple objects within the frame simultaneously.
 - Custom Detection: Allows users to define specific objects or classes for detection.

4. **Settings:**

- Adjust settings such as detection sensitivity, display preferences, and language options to customize your experience.

5. **Save and Share:**

- Save detected images or videos to your device's gallery for future reference.
- Share interesting findings with friends or colleagues via social media, messaging apps, or email directly from the app.

Over here you can see the name of the object you've scanned

Over here you can see the object you've scanned

By clicking on this button you can toggle the camera i.e. change the side of the camera

By clicking on this button you can send the command to the app to scan and show the results(name of the object)

EXAMPLES :-

TROUBLE SHOOTING

- 
- If you encounter any issues or unexpected behavior, try the following:
 - Restart the app and/or your device.
 - Check for app updates in the app store.
 - Ensure that permissions for camera access and other necessary functions are enabled.
 - Contact our support team for further assistance if needed.

PRIVACY & SECURITY

We are committed to protecting your privacy and security.

The app does not store or transmit any images or videos unless explicitly saved or shared by the user.

All processing and analysis are performed locally on your device, ensuring that your data remains private and confidential.

We value your feedback!
If you have any
suggestions, feature
requests, or encounter
any issues while using
the app, please don't
hesitate to reach out to
us through the provided
feedback channels.

FEED BACK

CONCLUSION

Thank you for choosing our Object Detector App! We hope this user manual helps you make the most out of its features. Whether you're exploring the world around you or conducting research, we aim to provide you with a seamless and enjoyable object recognition experience. Happy Detecting!
